This book aims to perform an impartial analysis to evaluate the implications of the environmental costs and impacts of a wide range of technologies and energy strategies. This information is intended to be used to support decision-making by groups, including researchers, industry, regulators, and policy-makers. Life cycle assessment (LCA) and technoeconomic analysis can be applied to a wide variety of technologies and energy strategies, both established and emerging. LCA is a method used to evaluate the possible environmental impacts of a product, material, process, or activity. It assesses the environmental impact throughout the life cycle of a system, from the acquisition of materials to the manufacture, use, and final disposal of a product. Technoeconomic analysis refers to cost evaluations, including production cost and life cycle cost. Often, in order to carry out technoeconomic analysis, researchers are required to obtain data on the performance of new technologies that operate on a very small scale in order to subsequently design configurations on a commercial scale and estimate the costs of such expansions. The results of the developed models help identify possible market applications and provide an estimate of long-term impacts. These methods, together with other forms of decision analysis, are very useful in the development and improvement of energy objectives, since they will serve to compare different decisions, evaluating their political and economic feasibility and providing guidance on potential financial and technological risks.

Socially responsible investing (SRI) is an investment approach that combines investors' financial as well as nonfinancial goals in the security selection process. Technically, investors can engage in SRI either by directly investing in companies that implement corporate social activities or by investing their money in SRI funds, which apply screening criteria to select securities. The screening process applied by the SRI funds has led to controversy among academics regarding whether the use of SRI screens in the security selection process influences the financial performance of the funds. The empirical study analyzes whether or not the screening process applied by such funds influences their financial performance. Previous research mostly has focused on analyzing the performance of SRI equity funds established in the United States. The study at hand not only includes SRI equity funds, but also SRI balanced and fixed income funds established in Europe, the biggest market for SRI globally. The study provides unexpected results that are not only of interest for investors, who want to get a better understanding of the effect on the financial performance of their portfolios in case SRI funds are added. The results are also relevant for SRI fund managers, who are interested in promoting their funds and attracting (new) investors, and for academics, whose research interests are e. g., located in the fields of SRI, fund portfolio performances and market efficiencies.

Ross, Essentials of Corporate Finance 10e focuses on what undergraduate students with widely varying backgrounds and interests need to take away from a core course in business or corporate finance. The goal is to convey the most important concepts and principles at a level that is approachable for the widest possible audience. To achieve this goal, subjects are distilled down to the bare essentials, while retaining a decidedly modern approach to finance. In addition, understanding the "why" is just as important, if not more so, than understanding the "how" - especially in an introductory course. Readability and pedagogy are key throughout Essentials 10e. The text is written in a relaxed, conversational style that invites the students to join in the learning process rather than being a passive information absorber. The new edition downplays purely theoretical issues and minimises the use of extensive and elaborate calculations to illustrate points that are either intuitively obvious or of limited practical use. There are 3 basic themes visible throughout the book: emphasis on intuition/common sense, a unified valuation approach, and a managerial focus.

The Group Mind Fundamentals of Investment Management

Post the Financial Crash, the role of regulation and the impact of regulation on all aspects of the financial industry has broadened and intensified. This book offers a comprehensive review of the operations of the industry post-financial crisis from a variety of perspectives. This new edition builds upon the authors' predecessor book, *Fundamentals of Investment: An Irish Perspective*. The core of the original text is retained particularly concerning fundamental concepts such as discounted cash flow valuation techniques. Changes in this new text are driven by two important factors. First, the long shadow of the Global Financial Crisis and the ensuing Great Recession continues to impact economies and financial markets. Second, the new text adopts a more international perspective with a focus on the UK and Ireland. The authors present the reader with a clear linkage between investment theory and concepts (the 'fundamentals') and the practical application of these concepts to the financial planning and advisory process. This practical perspective is driven by the decades-long fund management and stockbroking experience of the authors. Investment knowledge is a core competence required by large numbers of organisations and individuals in the financial services industry. This new edition will be an invaluable resource for financial advisers, financial planners and those engaged in advisory and/or support functions across the investment industry. Those taking investment modules in third-level educational institutes will find this book to be a useful complement to the more academically focused textbooks.
